

Share your research and
post your preprint articles
to TechRxiv today!

TechRxiv™

Preprints in Technology Research

TechRxiv is an open, moderated preprint repository for unpublished and pre-review research in electrical engineering, computer science, and related technology. TechRxiv provides a free platform for researchers to upload unpublished preprints with an aim to increase the accessibility of scientific findings, enhance collaboration among researchers, improve research, and build the future of scholarly communication. Authors can post preprint papers to TechRxiv regardless of where they eventually intend to submit and publish the paper.

Key Benefits for Researchers:

- Gather feedback and context from fellow scientists and engineers
- Rapidly disseminate work to a wide audience
- Establish the priority and precedence of a discovery
- Boost the visibility of research findings
- Find potential collaborators
- Document research results for grant reviewers in advance of publication
- Facilitate rapid evaluation of results
- Spot trends and encourage constructive feedback
- DOI citations that allow research to be cited by other papers
